Home Storage METALTEX

POLYTHERM®

Exclusive **Polytherm** coating is a double coating treatment. A transparent protective coating is applied on top of the first metallic layer. The transparent protection helps prevent rust, creates a barrier to shocks and extends the product's life. Polytherm is environmentally safe and direct food contact safe as well: it is non-toxic and rust resistant. Also, the transparent protection provides a dust barrier.

The product is easier to clean and it is also more attractive at the point of sale. The double coating notably increases the consumer's perceived value versus traditional polyethylene coated and epoxy painted products.
